

# Machine Learning with Python

MTH786U/P 2020/21

## Week 1 live lecture

Mihail Poplavskiy, Queen Mary University of London (QMUL)

# Organisation

- Lecturer: Dr Mihail Poplavskyi
- Email: [m.poplavskyi@qmul.ac.uk](mailto:m.poplavskyi@qmul.ac.uk)
- Office: Maths: MB-G21
- Office hours by request: On campus Mon 14:00-16:00, Online Wed 10:00-12:00

## Weekly schedule:

- Weeks 1-4:
  - Online lecture via Zoom Mon 9:00-11:00
  - On-campus lecture at Eng: 2.04 Mon 12:00-14:00
  - On campus tutorial at Banc.: David Sitzer LT Tue 9:00-11:00
  - Online tutorial via Zoom (?) Tue 12:00-14:00
- Weeks 5-9:
  - Online lecture via Zoom Mon 9:00-11:00, Tue 12:00-13:00
  - On-campus lecture at Eng: 2.04 Mon 12:00-14:00, Tue 9:00-10:00
  - On campus tutorial at Banc.: David Sitzer LT (?) Tue 10:00-11:00
  - Online tutorial via Zoom (?) Tue 13:00-14:00

# Organisation

- Lecturer: Dr Mihail Poplavskyi
- Email: [m.poplavskyi@qmul.ac.uk](mailto:m.poplavskyi@qmul.ac.uk)
- Office: Maths: MB-G21
- Office hours by request: On campus Mon 14:00-16:00, Online Wed 10:00-12:00

All relevant information also available on QMPlus page!

# Organisation

There will be

- **non-examinable** weekly assignment (theory first, practice from week 4 on)
- a mid-term exam (theory questions, 90 minutes, Monday, Jun 29th, Week 5)
- a final coding project

# Organisation

There will be

- **non-examinable** weekly assignment (theory first, practice from week 4 on)
- a mid-term exam (theory questions, 90 minutes, Monday, Jun 29th, Week 5)
- a final coding project

Coding project objectives:

- Implementation of a machine learning algorithm
- Submission of well-documented Jupyter notebook script
- Submission of a written report

# Organisation

There will be

- **non-examinable** weekly assignment (theory first, practice from week 4 on)
- a mid-term exam (theory questions, 90 minutes, Monday, Jun 29th, Week 5)
- a final coding project

Coding project objectives:

- Implementation of a machine learning algorithm
- Submission of well-documented Jupyter notebook script
- Submission of a written report

Final Grade =  $0.5 \times \text{Project Grade} + 0.5 \times \text{Exam Grade}$

# Learning outcomes

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical interference, mathematical modelling and optimisation

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical inference, mathematical modelling and optimisation
- describe the concept of supervised machine learning

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical inference, mathematical modelling and optimisation
- describe the concept of supervised machine learning
- formulate representative problems for supervised machine learning and derive mathematical models to solve them

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical inference, mathematical modelling and optimisation
- describe the concept of supervised machine learning
- formulate representative problems for supervised machine learning and derive mathematical models to solve them
- write algorithms to solve real-world supervised machine learning problems

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical inference, mathematical modelling and optimisation
- describe the concept of supervised machine learning
- formulate representative problems for supervised machine learning and derive mathematical models to solve them
- write algorithms to solve real-world supervised machine learning problems
- process and interpret data

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical inference, mathematical modelling and optimisation
- describe the concept of supervised machine learning
- formulate representative problems for supervised machine learning and derive mathematical models to solve them
- write algorithms to solve real-world supervised machine learning problems
- process and interpret data
- work as part of a team on the solution of real-world, supervised machine learning problems

# Learning outcomes

- understand basic & advanced concepts in linear algebra, calculus, probability, statistical inference, mathematical modelling and optimisation
- describe the concept of supervised machine learning
- formulate representative problems for supervised machine learning and derive mathematical models to solve them
- write algorithms to solve real-world supervised machine learning problems
- process and interpret data
- work as part of a team on the solution of real-world, supervised machine learning problems
- write scientific reports

# Weekly procedure

Attend live lectures (as per your selection online and on-campus)

Read corresponding parts of lecture notes before coming to a lecture. No worries if you haven't done so this week, but please make sure you do so for the remainder of the module

Take part in the live tutorials

Half to discuss previous week's coursework, half to work on this week's coursework

Complete the coursework ahead of the following week

To the best of your abilities; coursework is teamwork, so please engage with your peers

Post your questions in the student forum
